The atmosphere of the early Earth is hypothesized to have been rich in reducing gases such as hydrogen (H₂). H₂ has been proposed as the first electron donor leading to ATP synthesis due to its ubiquity throughout the biosphere as well as its ability to easily diffuse through microbial cells and its low activation energy requirement.

History. The first record of an economic impact of mycoviruses on fungi was recorded in cultivated mushrooms (*Agaricus bisporus*) in the late 1940s and was called the La France disease. Hollings found more than three different types of viruses in the abnormal sporophores. This report essentially marks the beginning of mycovirology.

The time before the symptoms of a viral infection appear is called the incubation period. During this time, viral genomes are replicating and the host is responding, producing cytokines such as interferon that can have global effects, leading to the classical symptoms of an acute infection (e.g., fever, malaise, aches, pains, and nausea). These symptoms are called the prodrome, to distinguish ...

Example areas in basic medical research include cellular and molecular biology, medical genetics, immunology, neuroscience, and psychology. Researchers, mainly in universities or government-funded research institutes, aim to establish an understanding of the cellular, molecular and physiological mechanisms of human health and disease.

In recent years, as concerns about antibiotic resistance and food safety have escalated, researchers have become interested in the use of bacteriophages to detect and combat bacterial contamination of food products [1 – 6]. Cocktails of obligately lytic phages have been applied to control such problematic foodborne pathogens as *Escherichia coli* O157:H7, *Shigella*, *Salmonella*, *Listeria* and ...
