

CLIMATE CHANGE IN CONTEXT

### **climate change in context pdf**

Climate change occurs when changes in Earth's climate system result in new weather patterns that last for at least a few decades, and maybe for millions of years. The climate system is comprised of five interacting parts, the atmosphere (air), hydrosphere (water), cryosphere (ice and permafrost), biosphere (living things), and lithosphere (earth's crust and upper mantle).

Our lives depend on energy wherever we live. But in order to prosper while tackling climate change, society needs to provide much more energy for a growing global population while finding ways to emit much less CO<sub>2</sub>. Shell has long recognised the climate challenge and the role of energy in enabling a decent quality of life.

Why is this important? NAB recognises that climate change is a significant risk and a major challenge for the global economy and society. We support the transition to a low carbon economy, consistent with the global agreement reached in Paris to limit global warming to less than 2 degrees above pre-industrial levels (the Paris Agreement).

Financing climate change is an important part of the World Bank Group's business. Our focus has resulted in significant financing flowing to support low-emissions and resilient development. For example, mitigation support for the world's poorest countries through the Bank's IDA reached \$2.3 billion during fiscal year 2013, while the IFC's mitigation financing increased 50 percent to \$2.5 billion.
