A computer cluster is a set of loosely or tightly connected computers that work together so that, in many respects, they can be viewed as a single system. Unlike grid computers, computer clusters have each node set to perform the same task, controlled and scheduled by software.. The components of a cluster are usually connected to each other through fast local area networks, with each node ...

Who We Are. The Scientific Federation is an expert-driven non-profit international conference organizer, initiated to provide an international forum for the appearance and discussions of cutting edge research in the fields of science, medical, clinical, technology, engineering, life sciences and etc.,

### **3rd Global Conference and Expo on Applied Science**

Contemporary cognitive scientists use a wide notion of analogy, extensionally close to that of Plato and Aristotle, but framed by Gentner's (1983) structure mapping theory. The same idea of mapping between source and target is used by conceptual metaphor and conceptual blending theorists. Structure mapping theory concerns both psychology and computer science.

In this paper, we report on a two-scale approach for efficient matrix-free finite element simulations. It is an extended version of our previous conference publication .The proposed method is based on surrogate element matrices constructed by low order polynomial approximations.
