Not all farms have cattle and of these not all have cows. The survey showed that some 74% owned cattle, while only 50% had cows that could produce milk and offsprings. The other animals are oxen used for draught purposes. The total milk production in Afghanistan is not enough to meet the demands for dairy products.

### **Dairy Production and Processing in Afghanistan**

we are going to concentrate on dairy cattle as they sup-ply most of our country's milk. We're going to learn more about milk production. We'll make models of a cow's mammary gland and replicate the milk production pro-cess. The mammary gland is the part of the animal that is responsible for milk production, also called lactation.
