In mathematics an identity is an equality relation  $A = B$ , such that A and B contain some variables and A and B produce the same value as each other regardless of what values (usually numbers) are substituted for the variables. In other words,  $A = B$  is an identity if A and B define the same functions. This means that an identity is an equality between functions that are differently defined.

In mathematics, the trigonometric functions (also called circular functions, angle functions or goniometric functions) are functions of an angle. They relate the angles of a triangle to the lengths of its sides. Trigonometric functions are important in the study of triangles and modeling periodic phenomena, among many other applications.

Unless otherwise stated, group functions ignore NULL values. If you use a group function in a statement containing no GROUP BY clause, it is equivalent to grouping on all rows. For more information, see Section 12.17.3, “MySQL Handling of GROUP BY”. For numeric arguments, the variance and standard deviation functions return a DOUBLE value.

OpenSCAD is a 2D/3D and solid modeling program which is based on a Functional programming language used to create models that are previewed on the screen, and rendered into 3D mesh which allows the model to be exported in a variety of 2D/3D file formats.. A script in the OpenSCAD language is used to create 2D or 3D models. This script is a free format list of action statements.
