A geographic information system (GIS) is a system designed to capture, store, manipulate, analyze, manage, and present spatial or geographic data. GIS applications are tools that allow users to create interactive queries (user-created searches), analyze spatial information, edit data in maps, and present the results of all these operations.

The term "Abandoned populated places" is a Feature Designation Name in databases sourced by the National Geospatial-Intelligence Agency and GeoNames.. Populated places can be abandoned. Sometimes the structures are still easily accessible, such as in a ghost town, and these may become tourist attractions. Some places that have the appearance of a ghost town, however, may still be defined as ...

Fig. 2 shows an example of the application of the graph visualization pipeline. The graph represents drug to drug interactions in DrugBank [], encompassing 1,038 vertices (drugs) and 22,927 edges (interactions). Data has been retrieved from the public Bio2RDF SPARQL endpoint 1 and processed with Gephi. Colors are assigned to communities detected by the Louvain method [], and layout is done with ...
