Sir David Attenborough: The Truth About Climate Change, October 22, 2006 . As well as the links above, see also Skeptical Science, which, while examining the arguments of global warming skepticism, provides information on causes of anthropogenic global warming.. Doesn't recent record cold weather disprove Global Warming?

### **Climate Change and Global Warming Introduction**

Scientific opinion on climate change is a judgment of scientists regarding the degree to which global warming is occurring, its likely causes, and its probable consequences.. A related—but not identical—term, "scientific consensus on climate change", is the prevailing view on climate change within the scientific community. The consensus is that: Earth's climate has warmed significantly ...

### **Scientific opinion on climate change - Wikipedia**

Climate change denial, or global warming denial, is part of the global warming controversy.It involves denial, dismissal, or unwarranted doubt that contradicts the scientific opinion on climate change, including the extent to which it is caused by humans, its impacts on nature and human society, or the potential of adaptation to global warming by human actions.

Abstract. Impacts of global climate change on terrestrial ecosystems are imperfectly constrained by ecosystem models and direct observations. Pervasive ecosystem transformations occurred in response to warming and associated climatic changes during the last glacial-to-interglacial transition, which was comparable in magnitude to warming projected for the next century under high-emission scenarios.

The global climate is changing, and is already affecting the Greater Yellowstone Ecosystem. Scientists predict wolverine, lynx, and pikas (shown here) may lose habitat in the park. Today, climate change is no longer a vague threat in our future; it is the changing reality we live with, and requires ...

1. Introduction. Reducing risks to food security from climate change is one of the major challenges of the 21st century. The impacts of climate change on crop yield can already be detected in observed data (Lobell et al., 2011). Climate impact studies on crops predominate, but impacts on fisheries and livestock production are no less serious (Creighton et al., 2015, Herrero et al., 2015).
