Electrodynamics is the physics of electromagnetic radiation, and electromagnetism is the physical phenomenon associated with the theory of electrodynamics. Electric and magnetic fields obey the properties of superposition. Thus, a field due to any particular particle or time-varying electric or magnetic field contributes to the fields present in the same space due to other causes.

The electron is a subatomic particle, symbol  $e^-$  or  $\beta^-$ , whose electric charge is negative one elementary charge. Electrons belong to the first generation of the lepton particle family, and are generally thought to be elementary particles because they have no known components or substructure. The electron has a mass that is approximately 1/1836 that of the proton.

A new detection system directly observes a type of entanglement in which a photon's energy is correlated with the time its partner is detected. [35] As cloud storage becomes more common, data security is an increasing concern. [34] Scientists of

Ziemia oraz pozostałe planety Układu Słonecznego powstały  $4,54 \pm 0,05$  mld lat temu z mgławicy słonecznej – obłoku gazu i pyłu, który podczas powstawania Słońca przekształcił się w dysk. Z owego dysku miały powstać wszystkie planety oraz planetoidy. Najstarszy materiał znaleziony w Układzie Słonecznym powstał  $4,5672 \pm 0,0006$  mld lat temu.
