In a rat perinatal and postnatal development study, oxymetazoline hydrochloride was orally administered to pregnant rats once daily from gestation day 6 through lactation day 20.

HIGHLIGHTS OF PRESCRIBING INFORMATION

Delirium, also known as acute confusional state, is an organically-caused decline from a previously baseline level of mental function that develops over a short period of time (hours to days). Delirium is not a disease itself but a syndrome encompassing disturbances in attention, consciousness, and cognition. It may also involve other neurological deficits, like psychomotor disturbances (e.g ...

Delirium - Wikipedia

In the phenomenon of phantom limb sensation, a person continues to feel pain or sensation within a part of their body that has been amputated. This is strangely common, occurring in 60–80% of amputees. An explanation for this is based on the concept of neuroplasticity, as the cortical maps of the removed limbs are believed to have become engaged with the area around them in the postcentral gyrus.

Similar toxicities were observed in the initial patients treated with CD19 CAR T cells. In the first pediatric ALL patient treated 8, 9, it became clear that supraphysiologic cytokine elevation was responsible for the vast majority of symptoms, suggesting that these toxicities were the result of CRS. Investigators struggled with the then-accepted definition of and grading scheme for CRS.
