OPTIMIZATION An introduction A. Astol? First draft – September 2002 Last revision – September 2006

OPTIMIZATION An introduction

Transportation planning is the process of defining future policies, goals, investments, and designs to prepare for future needs to move people and goods to destinations. As practiced today, it is a collaborative process that incorporates the input of many stakeholders including various government agencies, the public and private businesses.

NONLINEAR PROGRAMMING $\min_{x \in X} f(x)$, where $f: n \rightarrow \mathbb{R}$ is a continuous (and usually differentiable) function of n variables • $X = \text{non-convex}$ is a subset of \mathbb{R}^n with a “continuous” character. • If $X = \mathbb{R}^n$, the problem is called unconstrained • If f is linear and X is polyhedral, the problem is a linear programming problem. Otherwise it is a nonlinear programming problem

LECTURE SLIDES ON NONLINEAR PROGRAMMING BASED ON LECTURES

CDP is an important aspect of managing value chains. Generally, the first step of CDP is to forecast product demand. A manager can plan resource deployment in accordance with the resulting forecasts. It's a bottom-up approach vs. top down planning. Associated risks with this method are: Low forecast accuracy and numbers of planners required.
