Page 3 of 8 Holographic Beam Forming and MIMO But that's today. What about 5G? The space dimension used by beamforming, as opposed to frequency and time, is already employed in 4G networks with the concept of a cell.

In radio, multiple-input and multiple-output, or MIMO (/ ? m a? m o?, ? m i? m o? /), is a method for multiplying the capacity of a radio link using multiple transmission and receiving antennas to exploit multipath propagation. MIMO has become an essential element of wireless communication standards including IEEE 802.11n (Wi-Fi), IEEE 802.11ac (Wi-Fi), HSPA+ (3G), WiMAX (4G), and Long ...

Radio resource management (RRM) is the system level management of co-channel interference, radio resources, and other radio transmission characteristics in wireless communication systems, for example cellular networks, wireless local area networks, wireless sensor systems radio broadcasting networks. RRM involves strategies and algorithms for controlling parameters such as transmit power, user ...

As far as the "BER for BPSK in OFDM with Rayleigh Multipath Channel" is concerned, I think I have no doubt on it, since as the result shows BPSK using OFDM with Rayleigh Multipath channel has the same performance as the BPSK(Single carrier) with a Rayleigh flat channel thanks to the characteristic of OFDM using CP.
