x Radical external beam radiotherapy (RT) is the mainstay of treatment in patients with locally advanced and localised non-small cell lung cancer (NSCLC) not suitable for surgery. While accepted as standard treatment, the magnitude of survival benefit of radical RT is not known as it has not been compared in randomised trials to a policy of no RT [1].

x A deep-neural-network-based algorithm was used to automatically segment the prostate for a large cohort of prostate cancer patients. DNN-based prostate segmentations were compared to the consensus contour for a smaller group of patients; the agreement between DNN segmentations and consensus contour was similar to the agreement reported in a previous study.
