TNM Classification of Malignant Tumours - 7th edition

The TNM Classification of Malignant Tumours (TNM) is a globally recognised standard for classifying the extent of spread of cancer. It is a classification system of the anatomical extent of tumor cancers. It has gained wide international acceptance for many solid tumor cancers, but is not applicable to leukaemia and tumors of the central nervous system. ...

TNM staging system - Wikipedia

Breast cancer classification divides breast cancer into categories according to different schemes criteria and serving a different purpose. The major categories are the histopathological type, the grade of the tumor, the stage of the tumor, and the expression of proteins and genes. As knowledge of cancer cell biology develops these classifications are updated.

Breast cancer classification - Wikipedia

Seven eModules on TNM Staging have been developed by eCancer and UICC for the purpose of educating and informing the global cancer community on the globally accepted classification of malignant tumours.
