A variational approach to spline functions theory 25  $\int_a^1 \frac{1}{2} p_1$  and  $\int_{tn;b}^2 P_1$ . From (1) we conclude that  $\frac{3}{4}$  is an optimal interpolating function – "optimal", in the sense that it minimize the functional  $Z \int [x(2)(t)]^2 dt$  over all functions in  $In$ . The theorem goes on to state that  $\frac{3}{4}$  is a cubic spline function in the meaning of Schoenberg definition (1946).
